Clearview®

Clearview® professional diagnostic products are recognized throughout the world for their simplicity, speed, and reliability. The extensive Clearview® portfolio now offers point-of-care diagnostics in pregnancy and ovulation, sexually transmitted diseases (STDs), infectious disease, respiratory disease, gastrointestinal disease and coagulation/cardiac conditions.

The line of products for pregnancy and ovulation testing is one of the best known and most comprehensive available, allowing the accurate assessment of pregnancy status (including ectopic pregnancy) and fertility with assays for a variety of reproductive hormones, including LH and hCG.

The Clearview® range also offers a test to detect sexually transmitted disease caused by *C. trachomatis* in both women and their partners.

In addition, there are Clearview® tests for a variety of infectious diseases, including mononucleosis and *H. pylori*, several respiratory infections such as *Streptococcus A*, RSV and influenza, and some common infectious gastrointestinal conditions. The Clearview® line also includes selected cardiac tests for thrombotic conditions (D-dimer) and myocardial necrosis. Recently, the Clearview® TB ELISA test has been introduced for the diagnosis of *Mycobacterium tuberculosis* (TB) in TB/HIV co-infected patients.
